THE ISAF
OFFSHORE
SPECIAL
REGULATIONS

for 2014 – 2015 V2

(Incorporating the amendments effective 1st January 2015)

Governing Offshore Racing for
Monohulls & Multihulls

Structural Features · Yacht Equipment
Personal Equipment · Training

International Sailing Federation
**Offshore Racing Environmental Code**

ISAF is committed to the promotion of care for the environment. In offshore racing we will

- use holding tanks where fitted and empty at a pump-out station or more than 3 miles offshore
- in the bilges use oil collection pads and dispose properly ashore
- use environmentally-friendly cleaning products suitable for the marine environment
- retain garbage on board for recycling or disposal ashore except on a long voyage when biodegradable waste may be discharged overboard
- avoid the use of 2-stroke engines (except advanced models with pollution control)
- use solar, water power or wind charging when appropriate
- use shore toilets when in port
- observe IMO guidelines on biofouling
The Special Regulations Sub-committee was created in 1967 by the newly formed Offshore Rule Co-ordinating Committee, later the Offshore Racing Congress.

As offshore racing extended into round-the-world and multihull activities, so too did the scope of Special Regulations, which now cover racing in seven categories.

Interpretations, amendments, and also extract files for particular categories and boat types, are available on the ISAF web site (www.sailing.org/specialregs).
DIAGRAMMATIC GUIDE
(see also alphabetical index)
Copyright:
When reprinting these regulations National Authorities and Race Organizers should:

- request copyright permission from ISAF and ORC Ltd (normally given free of charge)
- Display a copyright acknowledgement with the reprint
- make any amendments by deleting contrary provisions and indicating that changes have been made
- Supply a copy of the reprint to each of ISAF and ORC Ltd

Official interpretations shall take precedence over these Special Regulations and will be indexed, numbered, dated and displayed on the ISAF web site www.sailing.org/specialregs

Language & Abbreviations Used:
Mo - Monohull,
Mu - Multihull
** - means the item applies to all types of yacht in all Categories except 5 for which see Appendix J or 6 for which see Appendix L.

Sidebar - A side bar indicates a significant change in 2014
Italics - Guidance notes and recommendations are in italics

The use of the masculine gender shall be taken to mean either gender

Administration:
The Offshore Special Regulation are administered by the ISAF Special Regulation Sub-committee whose terms of reference are as follows:

ISAF Regulation 6.8.8.3 - The Special Regulations Sub-committee shall:

(a) be responsible for the maintenance, revision and changes to the ISAF Offshore Special Regulations governing offshore racing, under licence from ORC Ltd. Such changes shall be biennial with revised editions published in January of each even year, except that matters of an urgent nature affecting safety may be dealt with by changes to the Regulations on a shorter time scale;

(b) monitor developments in offshore racing relative to the standards of safety and seaworthiness

For the committee members names and contact details please refer to the ISAF yearbook.

Any queries please E-Mail: technical@isaf.co.uk
SECTION 1 - FUNDAMENTAL AND DEFINITIONS

1.01 Purpose and Use

1.01.1 It is the purpose of these Special Regulations to establish uniform minimum equipment, accommodation and training standards for monohull and multihull yachts racing offshore. A Proa is excluded from these regulations.

1.01.2 These Special Regulations do not replace, but rather supplement, the requirements of governmental authority, the Racing Rules and the rules of Class Associations and Rating Systems. The attention of persons in charge is called to restrictions in the Rules on the location and movement of equipment.

1.01.3 These Special Regulations, adopted internationally, are strongly recommended for use by all organizers of offshore races. Race Committees may select the category deemed most suitable for the type of race to be sailed.

1.02 Responsibility of Person in Charge

1.02.1 The safety of a yacht and her crew is the sole and inescapable responsibility of the person in charge who must do his best to ensure that the yacht is fully found, thoroughly seaworthy and manned by an experienced crew who have undergone appropriate training and are physically fit to face bad weather. He must be satisfied as to the soundness of hull, spars, rigging, sails and all gear. He must ensure that all safety equipment is properly maintained and stowed and that the crew know where it is kept and how it is to be used. He shall also nominate a person to take over the responsibilities of the Person in Charge in the event of his incapacitation.

1.02.2 Neither the establishment of these Special Regulations, their use by race organizers, nor the inspection of a yacht under these Special Regulations in any way limits or reduces the complete and unlimited responsibility of the person in charge.
1.02.3 Decision to race - The responsibility for a yacht's decision to participate in a race or to continue racing is hers alone - RRS Fundamental Rule 4.

1.03 Definitions, Abbreviations, Word Usage

1.03.1 Definitions of Terms used in this document

<p>| TABLE 1 |
|------------------|--------------------------------------------------|
| Age Date         | Month/year of first launch                       |
| AIS              | Automatic Identification Systems                 |
| CEN              | Comité Européen de Normalisation                 |
| CPR              | Cardio-Pulmonary Resuscitation                   |
| Coaming          | Includes the transverse after limit of the cockpit over which water would run in the event that when the yacht is floating level the cockpit is flooded or filled to overflowing. |
| DSC              | Digital Selective Calling                        |
| EN               | European Norm                                    |
| EPFS             | Electronic Position-Fixing System                |
| EPIRB            | Emergency Position-Indicating Radio Beacon       |
| FA Station       | The transverse station at which the upper corner of the transom meets the sheerline. |
| Foul-Weather Suit A foul weather suit is clothing designed to keep the wearer dry and maybe either a jacket and trousers worn together, or a single garment comprising jacket and trousers. |
| GMDSS            | Global Maritime Distress &amp; Safety System         |
| GNSS             | Global Navigation Satellite System               |
| GPIRB            | EPIRB, with integral GPS position-fixing         |
| ITU              | International Telecommunications Union           |
| GPS              | Global Positioning System                        |
| Hatch            | The term hatch includes the entire hatch assembly and also the lid or |</p>

1.03.2 The words "shall" and "must" are mandatory, and "should" and "may" are permissive.

1.03.3 The word "yacht" shall be taken as fully interchangeable with the word "boat".

**
SECTION 2 - APPLICATION & GENERAL REQUIREMENTS

2.01 Categories of Events

In many types of race, ranging from trans-oceanic sailed under adverse conditions to short-course day races sailed in protected waters, six categories are established, to provide for differences in the minimum standards of safety and accommodation required for such varying circumstances:

2.01.1 Category 0

Trans-oceanic races, including races which pass through areas in which air or sea temperatures are likely to be less than 5 degrees Celsius other than temporarily, where yachts must be completely self-sufficient for very extended periods of time, capable of withstanding heavy storms and prepared to meet serious emergencies without the expectation of outside assistance.

2.01.2 Category 1

Races of long distance and well offshore, where yachts must be completely self-sufficient for extended periods of time, capable of withstanding heavy storms and prepared to meet serious emergencies without the expectation of outside assistance.

2.01.3 Category 2

Races of extended duration along or not far removed from shorelines or in large unprotected bays or lakes, where a high degree of self-sufficiency is required of the yachts.

2.01.4 Category 3

Races across open water, most of which is relatively protected or close to shorelines.

2.01.5 Category 4

Short races, close to shore in relatively warm or protected waters normally held in daylight.

2.01.6 Category 5 - for inshore racing

Please refer to Appendix J where Special Regulations for Category 5 are given in full. The symbol "**" does not include Category 5.
2.01.7 Category 6 - for inshore racing

Please refer to Appendix L where Special Regulations for Category 6 are given in full. The symbol " ** " does not include Category 6.

2.02 Inspection

A yacht may be inspected at any time. If she does not comply with these Special Regulations her entry may be rejected, or she will be liable to disqualification or such other penalty as may be prescribed by the national authority or the race organizers.

2.03 General Requirements

2.03.1 All equipment required by Special Regulations shall:-

a) function properly

b) be regularly checked, cleaned and serviced

c) when not in use be stowed in conditions in which deterioration is minimised

d) be readily accessible

e) be of a type, size and capacity suitable and adequate for the intended use and size of the yacht.

2.03.2 Heavy items:

a) ballast, ballast tanks and associated equipment shall be permanently installed

b) heavy movable items including e.g. batteries, stoves, gas bottles, tanks, toolboxes and anchors and chain shall be securely fastened

c) heavy items for which fixing is not specified in Special Regulations shall be permanently installed or securely fastened, as appropriate

2.03.3 When to show navigation lights

a) navigation lights (OSR 3.27) shall be shown as required by the International Regulations for Preventing Collision at Sea, (Part C and Technical Annex 1). All yachts shall exhibit sidelights and a sternlight at the required times.
### SECTION 3 - STRUCTURAL FEATURES, STABILITY, FIXED EQUIPMENT

#### 3.01 Strength of Build, Ballast and Rig

Yachts shall be strongly built, watertight and, particularly with regard to hulls, decks and cabin trunks capable of withstanding solid water and knockdowns. They must be properly rigged and ballasted, be fully seaworthy and must meet the standards set forth herein. Shrouds shall never be disconnected.

#### 3.02 Watertight Integrity of a Hull

<table>
<thead>
<tr>
<th>Section</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>3.02.1</td>
<td>A hull, including, deck, coach roof, windows, hatches and all other parts, shall form an integral, essentially watertight unit and any openings in it shall be capable of being immediately secured to maintain this integrity.</td>
</tr>
<tr>
<td>3.02.2</td>
<td>Centreboard and daggerboard trunks and the like shall not open into the interior of a hull except via a watertight inspection/maintenance hatch of which the opening shall be entirely above the waterline of the yacht floating level in normal trim.</td>
</tr>
<tr>
<td>3.02.3</td>
<td>A canting keel pivot shall be completely contained within a watertight enclosure which shall comply with OSR 3.02.2. Access points in the watertight enclosure for control and actuation systems or any other purpose shall comply with OSR 3.02.1.</td>
</tr>
<tr>
<td>3.02.4</td>
<td>Moveable ballast systems shall be fitted with a manual control and actuation secondary system which shall be capable of controlling the full sailing load of the keel in the event of failure of the primary system. Such failures would include electrical and hydraulic failure and mechanical failure of the components and the structure to which it mounts. The system must be capable of being operational quickly and shall be operable at any angle of heel. It would be desirable if this system was capable of securing the keel on the centreline.</td>
</tr>
</tbody>
</table>
3.03 Hull Construction Standards (Scantlings)

3.03.1 a) A yacht of less than 24m in hull length (measured in accordance with ISO 8666) with the earliest of Age or Series Date on or after 1 January 2010 shall have:
   • been designed, built and maintained in accordance with the requirements of ISO 12215 Category A*
   • on board a certificate of building plan review from a notified body recognized by ISAF.
   • on board a declaration signed and dated by the builder to confirm the yacht is built in accordance with the plans reviewed by the Notified Body.

b) A yacht of 24m in hull length and over (measured in accordance with ISO 8666) with the earliest of Age or Series Date on or after 1 January 2010 shall have:
   • been designed, built and maintained in accordance with the requirements of a Classification Society recognized by ISAF
   • on board a certificate of building plan review from a Classification Society recognized by ISAF
   • on board a declaration signed and dated by the builder to confirm the yacht is built in accordance with the plans reviewed by the Classification Society.

3.03.2 a) A yacht of less than 24m in hull length (measured in accordance with ISO 8666), with the earliest of Age or Series Date on or after 1 January 2010, if subject to any significant repair or modification to the hull, deck, coachroof, keel or appendages on or after the 1 January 2010, shall have
   • the repair or modification designed and built in accordance with ISO 12215 Category A*
   • on board a certificate of building plan review for the repair or modification from a notified body recognized by ISAF
   • on board a declaration signed and dated by the builder to confirm that the repair or modification is in accordance with the requirements of ISO 12215 Category A*
b) A yacht of 24m in hull length and over (measured in accordance with ISO 8666), with the earliest of Age or Series Date on or after 1 January 2010, if subject to any significant repair or modification to the hull, deck, coachroof, keel or appendages on or after the 1 January 2010, shall have

• the repair or modification designed and built in accordance with the requirements of a Classification Society recognized by ISAF

• on board a certificate of building plan review for the repair or modification from a Classification Society recognized by ISAF

• on board a declaration signed and dated by the builder to confirm that the repair or modification is in accordance with the plans reviewed by the Classification Society.

3.03.3 In cases when a builder no longer exists a race organizer or class rules may accept a signed statement by a naval architect or other person familiar with the requirements of 3.03.1 and 3.03.2 above and in lieu of the builders declaration required by 3.03.1 and 3.03.2 above.

3.03.4 A monohull with the earliest of Age or Series Date before the 1 January 2010 shall comply with 3.03.1, 3.03.2 and 3.03.3 above or with appendix M to these OSR. A multihull shall comply with appendix M to these OSR.

* or as from time to time specified by ISAF

3.03.5 Regular inspection of the keel and keel/hull attachment structure are strongly recommended

3.04 Stability - Monohulls

3.04.1 Either with, or without, reasonable intervention from the crew a yacht shall be capable of self-righting from an inverted position. Self-righting shall be achievable whether or not the rig is intact.

a) When there is a moveable or variable ballast system, written instructions on how to right the boat after a capsize shall be prominently and clearly displayed. All persons on board shall have a thorough knowledge of the righting procedures.

3.04.2 A yacht shall be designed and built to resist capsize.
3.04.3 Yachts shall demonstrate compliance with ISO 12217-2*, either by EC Recreational Craft Directive certification (having obtained the CE mark) or the designer’s declaration, for the race categories as follows:

<table>
<thead>
<tr>
<th>OSR Category</th>
<th>0,1,2</th>
<th>3</th>
</tr>
</thead>
<tbody>
<tr>
<td>ISO Category</td>
<td>A</td>
<td>B</td>
</tr>
</tbody>
</table>

* The latest effective version of ISO 12217-2 should be used unless the yacht was already designed to a previous version

3.04.4 For yachts which cannot demonstrate compliance in accordance with 3.04.3, a yacht shall provide, as specified by the race organiser, either:

a) the stability index/AVS in ORC Rating System or
b) IRC SSS Base value or
c) STIX and AVS values as below

<table>
<thead>
<tr>
<th>OSR Category</th>
<th>0</th>
<th>1</th>
<th>2</th>
<th>3</th>
</tr>
</thead>
<tbody>
<tr>
<td>ORC Stability Index min</td>
<td>120</td>
<td>115</td>
<td>110</td>
<td>103</td>
</tr>
<tr>
<td>SSS Base Value min.</td>
<td>35</td>
<td>28</td>
<td>15</td>
<td></td>
</tr>
<tr>
<td>STIX min.</td>
<td>32</td>
<td>32</td>
<td>32</td>
<td>23</td>
</tr>
<tr>
<td>AVS min.</td>
<td>130 - 0.002*m</td>
<td>130 - 0.002*m</td>
<td>130 - 0.002*m</td>
<td>130 - 0.005*m</td>
</tr>
</tbody>
</table>

Where “m” is the mass of the boat in the minimum operating condition as defined by ISO 12217-2.

3.04.5 A race organizer should require compliance with a minimum stability rule or suitable stability standard.

3.04.6 Use of the ISO or any other index does not guarantee total safety or total freedom of risk from capsize or sinking.

3.04.7 For boats with moveable or variable ballast the method in OSR 3.04.4 shall apply plus the relevant additional requirement of OSR Appendix K.

3.04.8 Tanks for variable ballast shall be permanently installed and shall be provided with a system of isolating valves and pump(s) capable of manual operation at any angle of heel. A plan of the plumbing system shall be displayed aboard the boat.

3.04.9 A boat fitted with moveable and/or variable ballast
shall have a maximum static heel angle in the condition of Light Craft Condition (see ISO 12217-2) with moveable ballast moved fully to one side and variable ballast in the condition that produces maximum angle of heel of not greater than 35 degrees.

### 3.05 Stability and Flotation - Multihulls

Attention is drawn to ISO 12217-2.

#### 3.05.1 Adequate watertight bulkheads and compartments (which may include permanently installed flotation material) in each hull shall be provided to ensure that a multihull is effectively unsinkable and capable of floating in a stable position with at least half the length of one hull flooded. (see OSR 3.13.2).

#### 3.05.2 Multihulls built on or after Jan 1999 shall in every hull without accommodation be divided at intervals of not more than 4m (13ft 3") by one or more transverse watertight bulkheads.

#### 3.05.3 A yacht shall be designed and built to resist capsize.

### 3.06 Exits - Monohulls

#### 3.06.1 Yachts of LOA of 8.5 m (28 ft) and over with age or series date after January 1995 and after shall have at least two exits. At least one exit shall be located forward of the foremost mast except where structural features prevent its installation.

#### 3.06.2 Yachts first launched on or after January 2014 have a hatch with the following minimum clear openings in compliance with ISO 9094:

- Circular shape: diameter 450mm;
- Any other shape: minimum dimension of 380mm and minimum area of 0.18m². The dimension must be large enough to allow for a 380mm diameter circle to be inscribed.

The measurement of the minimum clear opening is illustrated in Figure 1.
3.06.3 when first launched prior to January 2014, if possible have each escape hatch in compliance with the dimensions in OSR 3.07.2(a)(ii); 

3.07 Exits and Escape Hatches - Multihulls

3.07.1 Exits

a) In a multihull of 8m (26.2ft) LOA and greater, each hull which contains accommodation shall have at least two exits.

b) In a multihull of less than 8m (26.2ft) LOA each hull which contains accommodation shall have at least two exits.

3.07.2 Escape Hatches, Underside Clipping Points & Handholds

a) In a multihull of 12m (39.4ft) LOA and greater each hull which contains accommodation shall:-

   i have an escape hatch for access to and from the hull in the event of an inversion;

   ii when first launched on or after January 2003 have a minimum clearance diameter through each escape hatch of 450mm or when an escape hatch is not circular, sufficient clearance to allow a crew member to pass through fully clothed;

   iii when first launched prior to January 2003, if possible have each escape hatch in compliance with the dimensions in OSR 3.07.2(a)(ii);

   iv when the yacht is inverted have each escape hatch above the waterline;

   v when first launched on or after January 2001 have each escape hatch at or near the midships station;
vi in a catamaran first launched on or after January 2003 have each escape hatch on the side nearest the vessel's central axis.

b) A trimaran of 12m (39.4ft) LOA and greater first launched on or after 1/03 shall have at least two escape hatches in compliance with the dimensions in OSR 3.07.2(a) (ii)

c) Each escape hatch must have been opened both from inside and outside within 6 months prior to an intended race

d) A multihull shall have on the underside appropriate handholds/clipping points sufficient for all crew (on a trimaran these shall be around the central hull).

e) A catamaran first launched on or after 1/03 with a central nacelle shall have on the underside around the central nacelle, handholds of sufficient capacity to enable all persons on board to hold on and/or clip on securely

f) In a catamaran with a central nacelle, it is recommended that each hull has an emergency refuge, accessible via a special hatch in the side of the hull nearest the vessel's central axis, which hatch may be opened and closed from the inside and outside

3.07.3 A multihull of less than 12m (39.4ft) LOA shall either have escape hatches in compliance with OSR 3.07.2 (a)(b) and (c) or shall comply with OSR 3.07.3 (a) and (b):

a) each hull which contains accommodation shall have, for the purpose of cutting an escape hatch, appropriate tools kept ready for instant use adjacent to the intended cutting site. Each tool shall be secured to the vessel by a line and a clip, and

b) in each hull at a station where an emergency hatch may be cut, the cutting line shall be clearly marked both inside and outside with an outline and the words ESCAPE CUT HERE
### 3.08 Hatches & Companionways

<table>
<thead>
<tr>
<th>Paragraph</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>3.08.1</td>
<td>No hatch forward of the maximum beam station, other than a hatch in the side of a coachroof, shall open in such a way that the lid or cover moves into the open position towards the interior of the hull (excepting ports having an area of less than 0.071m² (110 sq in)).</td>
</tr>
<tr>
<td>3.08.2</td>
<td>A hatch fitted forward of the maximum beam station, located on the side of the coachroof, opening into the interior of the boat, and of area greater than 0.071m² shall comply with ISO12216 design category A and be clearly labelled and used in accordance with the following instruction: “NOT TO BE OPENED AT SEA” Attention is drawn to SR 3.02.1</td>
</tr>
</tbody>
</table>
| 3.08.3    | A hatch shall be:  
  a) so arranged as to be above the water when the hull is heeled 90 degrees. Hatches over lockers that open to the interior of the vessel shall be included in this requirement. A yacht may have a maximum of four (two on each side of centerline) hatches that do not conform to this requirement, provided that the opening of each is less than 0.071 sq m (110 sq in). Effective for boats of a series begun after January 1, 2009, a written statement signed by the designer or other person who performed the downflooding analysis shall be carried on board. For purposes of this rule the vessel’s displacement condition for the analysis shall be the Light Craft Condition LCC (in conformity with 6.3 of the EN ISO 8666 standard and 3.5.1 of the EN ISO12217-2 standard).  
  b) permanently attached  
  c) capable of being firmly shut immediately and remaining firmly shut in a 180 degree capsize (inversion) |
| 3.08.4    | A companionway hatch shall:  
  a) be fitted with a strong securing arrangement which shall be operable from the exterior and interior including when the yacht is inverted  
  b) have any blocking devices: |

** | ** | Mo0,1,2,3,4 | ** | ** | **
i capable of being retained in position with the hatch open or shut

ii whether or not in position in the hatchway, secured to the yacht (e.g. by lanyard) for the duration of the race, to prevent their being lost overboard

iii permit exit in the event of inversion

3.08.5 If the companionway extends below the local sheerline and the boat has a cockpit opening aft to the sea the boat shall comply with one of the following:

a) the companionway sill shall not extend below the local sheerline. Or

b) be in full compliance with all aspects of ISO 11812 to design category A

3.08.6 For boats with a cockpit closed aft to the sea where the companionway hatch extends below the local sheerline, the companionway shall be capable of being blocked off up to the level of the local sheerline, provided that the companionway hatch shall continue to give access to the interior with the blocking devices (e.g. washboards) in place

3.08.7 A companionway hatch extending below the local sheerline and shall comply with either (a) or (b):

a) be capable of being blocked off up to the level of the local sheerline, whilst giving access to the interior with the blocking devices (e.g. washboards) in place with a minimum sill height of 300 mm.

b) i A companionway hatch shall be in compliance with ISO 11812 – Watertight cockpits and quick-draining cockpits to design category A

   ii A companionway hatch shall be in compliance with ISO 11812 – Watertight cockpits and quick-draining cockpits to design category B

3.09 Cockpits - Attention is Drawn to ISO 11812

3.09.1 Cockpits shall be structurally strong, self-draining quickly by gravity at all angles of heel and permanently incorporated as an integral part of the hull.
3.09.2 Cockpits must be essentially watertight, that is, all openings to the hull must be capable of being strongly and rigidly secured

3.09.3 A bilge pump outlet pipe shall not be connected to a cockpit drain. See OSR 3.09.8 for cockpit drain minimum sizes

3.09.4 A cockpit sole shall be at least 2% LWL above LWL (or in IMS yachts first launched before 1/03, at least 2% L above LWL)

3.09.5 A bow, lateral, central or stern well shall be considered a cockpit for the purposes of OSR 3.09

3.09.6 In cockpits opening aft to the sea structural openings aft shall be not less in area than 50% maximum cockpit depth x maximum cockpit width.

3.09.7 ** Cockpit Volume **

<table>
<thead>
<tr>
<th>earliest of age or series date</th>
<th>detail</th>
<th>race category</th>
</tr>
</thead>
<tbody>
<tr>
<td>before April 1992</td>
<td>the total volume of all cockpits below lowest coamings shall not exceed 6% (LWL x maximum beam x freeboard abreast the cockpit).</td>
<td>MoMu0,1</td>
</tr>
<tr>
<td>before April 1992</td>
<td>the total volume of all cockpits below lowest coamings shall not exceed 9% (LWL x maximum beam x freeboard abreast the cockpit).</td>
<td>MoMu2,3,4</td>
</tr>
<tr>
<td>April 1992 and after</td>
<td>as above for the appropriate category except that &quot;lowest coamings&quot; shall not include any aft of the FA station and no extension of a cockpit aft of the working deck shall be included in calculation of cockpit volume</td>
<td>**</td>
</tr>
</tbody>
</table>

*Note* *IMS measured boats may instead of the terms LWL, maximum beam, freeboard abreast the cockpit, use the IMS terms L, B and FA.*

3.09.8 ** Cockpit Drains **

See OSR 3.09.1. Cockpit drain cross section area (after allowance for screens if fitted) shall be:-

a) in yachts with earliest of age or series date before 1/72 or in any yacht under 8.5m (28ft) LOA - at least that of 2 x 25mm diameter (one inch)
### 3.10 Sea Cocks or Valves

Sea cocks or valves shall be permanently installed on all through-hull openings below the waterline except integral deck scuppers, speed indicators, depth finders and the like, however a means of closing such openings shall be provided.

**Category:** **

### 3.11 Sheet Winches

Sheet winches shall be mounted in such a way that an operator is not required to be substantially below deck.

**Category:** **

### 3.12 Mast Step

The heel of a keel stepped mast shall be securely fastened to the mast step or adjoining structure.

**Category:** **

### 3.13 Watertight Bulkheads

*multihulls also see OSR 3.05*

#### 3.13.1 A hull shall have either a watertight "crash" bulkhead within 15% of LOA from the bow and abaft the forward end of LWL, or permanently installed closed-cell foam buoyancy effectively filling the forward 30% LOA of the hull.

**Category:** Mu0,1,2,3,4

#### 3.13.2 Any required watertight bulkhead shall be strongly built to take a full head of water pressure without allowing any leakage into the adjacent compartment.

**Category:** Mo0

#### 3.13.3 A yacht shall have at least two watertight transverse main bulkheads in addition to any bulkheads positioned within the forward and aft 15 percent of the boat's LOA.

**Category:** Mo0

#### 3.13.4 Outside deck access for inspection and pumping shall be provided to every watertight compartment terminated by a hull section bulkhead, except that deck access to extreme end "crash" compartments is not required.

**Category:** Mo0

#### 3.13.5 An access hatch shall be provided in every required watertight bulkhead (except a "crash" bulkhead). The access hatch shall have means of watertight closure permanently attached to the main panel, or lid, or
cover of the hatch. The closure shall not require tools to operate.

a) An access hatch should be capable of being securely shut within 5 seconds

3.13.6 It is strongly recommended that:

a) an extreme end "crash" bulkhead should be provided at the stern. If practicable the aft "crash" bulkhead should be forward of the rudder post.

b) after flooding any one major compartment, a yacht should be capable of providing shelter and sustenance for a full crew for 2 weeks in an essentially dry compartment having direct access to the deck

c) compartments between watertight bulkheads should be provided with a means of manually pumping out from within the hull from a position outside the compartment

3.14 Pulpits, Stanchions, Lifelines

3.14.1 When due to the particular design of a multihull it is impractical to precisely follow Special Regulations regarding pulpits, stanchions, lifelines, the regulations for monohulls shall be followed as closely as possible with the aim of minimising the risk of people falling overboard.

3.14.2 Lifeline deflection shall not exceed the following:

a) When a deflecting force of 40N is applied to a lifeline midway between supports of an upper or single lifeline, the lifeline shall not deflect more than 50mm. This measurement shall be taken at the widest span between supports that are aft of the mast.

b) When a deflecting force of 40N is applied midway between supports of an intermediate lifeline of all spans that are aft of the mast, deflection shall not exceed 120mm from a straight line between the stanchions.

3.14.3 The following shall be provided:

a) a bow pulpit with vertical height and openings essentially conforming to Table 7. Bow pulpits may
be open but the opening between the pulpit and any part of the boat shall never be greater than 360mm (14.2") (this requirement shall be checked by presenting a 360mm (14.2") circle inside the opening).

![Figure 2 - Diagram Showing Pulpit Opening](image)

b) a stern pulpit, or lifelines arranged as an adequate substitute, with vertical openings conforming to Table 7

c) lifelines (guardlines) supported on stanchions, which, with pulpits, shall form an effectively continuous barrier around a working deck for man-overboard prevention. Lifelines shall be permanently supported at intervals of not more than 2.20m (86.6") and shall not pass outboard of supporting stanchions

d) upper rails of pulpits at no less height above the working deck than the upper lifelines as in Table 7

e) Openable upper rails in bow pulpits shall be secured shut whilst racing

f) Pulpits and stanchions shall be permanently installed. When there are sockets or studs, these shall be through-bolted, bonded or welded. The pulpit(s) and/or stanchions fitted to these shall be mechanically retained without the help of the lifelines. Without sockets or studs, pulpits and/or stanchions shall be through-bolted, bonded or

---

**Figure 2 - Diagram Showing Pulpit Opening**

Mo0,1,2,3,4

**

**

**
welded

g) The bases of pulpits and stanchions shall not be further inboard from the edge of the appropriate working deck than 5% of maximum beam or 150 mm (6 in), whichever is greater.

h) Stanchion or pulpit or pushpit bases shall not be situated outboard of a working deck. For the purpose of this rule the base shall be taken to include a sleeve or socket into which the tube is fitted but shall exclude a baseplate which carries fixings into the deck or hull.

i) Provided the complete lifeline enclosure is supported by stanchions and pulpit bases effectively within the working deck, lifeline terminals and support struts may be fixed to a hull aft of the working deck.

j) Lifelines need not be fixed to a bow pulpit if they terminate at, or pass through, adequately braced stanchions set inside and overlapping the bow pulpit, provided that the gap between the upper lifeline and the bow pulpit does not exceed 150 mm (6 in).

k) Lifelines shall be continuous and fixed only at (or near) the bow and stern. However a bona fide gate shall be permitted in the lifelines on each side of a yacht. Except at its end fittings, the movement of a lifeline in a fore-and-aft direction shall not be constrained. Temporary sleeving in 3.14.6 (c) shall not modify tension in the lifeline.

l) Stanchions shall be straight and vertical except that:-

i) within the first 50 mm (2 in) from the deck, stanchions shall not be displaced horizontally from the point at which they emerge from the deck or stanchion base by more than 10 mm (3/8 in), and

ii) stanchions may be angled to not more than 10 degrees from vertical at any point above 50 mm (2 in) from the deck.
It is strongly recommended that designs also comply to ISO 15085

3.14.4 Special Requirements for Pulpits, Stanchions, Lifelines on Multihulls

The following shall be provided:-

a) on a trimaran - a bow pulpit on the main hull, with lifelines around the main hull supported on stanchions. The lifelines may be interrupted where there are nets or crossbeam wings outboard of the main hull.

b) on a trimaran - where a net joins the base of a bow pulpit on the main hull, an additional lifeline from the top of the pulpit to the forward crossbeam at or outboard of the crossbeam mid-point.

c) on a trimaran - at a main or emergency steering position on an outrigger with or without a cockpit, lifelines protecting an arc of 3 meters diameter centred on the steering position. (When measuring between lifelines their taut, undeflected positions shall be taken for this purpose).

d) on a catamaran - lifelines from bow to stern on each hull and transverse lifelines to form an effectively continuous barrier around the working area for man-overboard prevention. The transverse lifelines shall be attached to bow and stern pulpits or superstructure. A webbing, strop or rope (minimum diameter 6mm) shall be rove zig-zag between the transverse lifelines and the net.
3.14.5 Lifeline Height, Vertical Openings, Number of Lifelines

3.14.6 Lifeline Minimum Diameters, Required Materials, Specifications

a) Lifelines shall be of:
   - stranded stainless steel wire or
   - High Modulus Polyethylene (HMPE) (Dyneema®/Spectra® or equivalent) rope (Braid on braid is recommended)

b) The minimum diameter is specified in table 8 below

c) Stainless steel lifelines shall be uncoated and used without close-fitting sleeving, however, temporary sleeving may be fitted provided it is

Page - 25 -
regularly removed for inspection.

d) **When stainless wire is used, Grade 316 is recommended.**

e) When HMPE (Dyneema®/Spectra®) is used, it shall be protected from chafe an shall be spliced in accordance with the manufacturer’s recommended procedures.

f) A taut lanyard of synthetic rope may be used to secure lifelines provided the gap it closes does not exceed 100 mm (4 in). This lanyard shall be replaced annually at a minimum.

g) All wire, fittings, anchorage points, fixtures and lanyards shall comprise a lifeline enclosure system which has at all points at least the breaking strength of the required lifeline wire.

**TABLE 8 – Minimum Diameters**

</table>

3.15 **Multihull Nets or Trampolines**

3.15.1 The word “net” is interchangeable with the word “trampoline”

A net shall be:-

a) essentially horizontal

b) made from durable woven webbing, water permeable fabric, or mesh with openings not larger than 5.08 cm (2 inches) in any dimension. Attachment points shall be planned to avoid chafe. The junction between a net and a yacht shall present no risk of foot trapping

c) solidly fixed at regular intervals on transverse and longitudinal support lines and shall be fine-stitched to a bolt rope
d) able to carry the full weight of the crew either in normal working conditions at sea or in case of capsize when the yacht is inverted.

e) It is recommended that lines used to tie the nets should be individually tied and not continuously connected to more than four attachment points per connecting line

3.15.2 Trimarans with Double Crossbeams

a) A trimaran with double crossbeams shall have nets on each side covering:-

b) the rectangles formed by the crossbeams, central hull and outriggers

c) the triangles formed by the aft end of the central pulpit, the mid-point of each forward crossbeam, and the intersection of the crossbeam and the central hull

d) the triangles formed by the aftermost part of the cockpit or steering position (whichever is furthest aft), the mid-point of each after crossbeam, and the intersection of the crossbeam and the central hull; except that:-

e) the requirement in OSR 3.15.2(d) shall not apply when cockpit coamings and/or lifelines are present which comply with the minimum height requirements in Table 7

3.15.3 Trimarans with Single Crossbeams

a) A trimaran with a single crossbeam shall have nets between the central hull and each outrigger:-

b) on each side between two straight lines from the intersection of the crossbeam and the outrigger, respectively to the aft end of the pulpit on the central hull, and to the aftermost point of the cockpit or steering position on the central hull (whichever is furthest aft)

3.16 Catamarans

On a catamaran the total net surface shall be limited:

a) laterally by the hulls; and

b) longitudinally by transverse stations through the
forestay base, and the aftermost point of the boom lying fore and aft. However, a catamaran with a central nacelle (non-immersed) may satisfy the regulations for a trimaran.

### 3.17 Toe Rail or Foot - Stop

3.17.1 A toe rail of minimum height 25 mm (1 in) shall be permanently installed around the foredeck from abreast the mast, except in way of fittings and not further inboard from the edge of the working deck than one third of the local half-beam.

3.17.2 The following variations shall apply:-

<table>
<thead>
<tr>
<th>LOA</th>
<th>Earliest of Age or Series Date</th>
<th>minimum requirements</th>
</tr>
</thead>
<tbody>
<tr>
<td>any</td>
<td>before January 1981</td>
<td>a toe rail minimum height of 20 mm (3/4 in) is acceptable.</td>
</tr>
<tr>
<td>any</td>
<td>before January 1994</td>
<td>an additional lifeline of minimum height 25 mm (1 in) and maximum height 50 mm (2 in) is acceptable in lieu of a toe rail (but shall not count as an intermediate lifeline).</td>
</tr>
<tr>
<td>any</td>
<td>January 1994 and after</td>
<td>the toe rail shall be fitted as close as practicable to the vertical axis of stanchion bases but not further inboard than 1/3 the local half-beam.</td>
</tr>
</tbody>
</table>

### 3.18 Toilet

3.18.1 A toilet, permanently installed

3.18.2 A toilet, permanently installed or fitted bucket

### 3.19 Bunks

3.19.1 Bunks, permanently installed, one for each member of the declared crew

3.19.2 Bunks, permanently installed

### 3.20 Cooking Facilities

3.20.1 A cooking stove, permanently installed or securely fastened with safe accessible fuel shutoff control and capable of being safely operated in a seaway.

### 3.21 Drinking Water Tanks & Drinking Water

3.21.1 Drinking Water Tanks

a) A yacht shall have a permanently installed delivery
**ISAF OFFSHORE SPECIAL REGULATIONS**

<table>
<thead>
<tr>
<th>pump and water tank(s):</th>
</tr>
</thead>
<tbody>
<tr>
<td>i dividing the water supply into at least three compartments</td>
</tr>
<tr>
<td>ii dividing the water supply into at least two compartments</td>
</tr>
</tbody>
</table>

### 3.21.2 Drinking Water

**a)** Each yacht shall have the necessary equipment (which may include watermakers and tanks containing water) permanently installed to provide at least 3 litres of drinking water per person per day for at least the likely duration of the voyage

### 3.21.3 Emergency Drinking Water

**a)** At least 9 litres (2 UK gallons, 2.4 US gallons) of drinking water for emergency use shall be provided in a dedicated and sealed container or container(s)

**a)** In the absence of a power driven watermaker, at least 1 litre per person per day in at least two separate containers shall be provided for the expected duration of the voyage

**c)** When a power-driven watermaker is on board, at least 500ml per person per day in at least two separate containers shall be provided for the expected duration of the voyage

**d)** Facilities shall be provided to collect rainwater for drinking purposes including when dismasted

**e)** *All drinking water and any desalination units should be so arranged that drinking water is readily accessible when the yacht is inverted.*

### 3.22 Hand Holds

Adequate hand holds shall be fitted below deck so that crew members may move about safely at sea. *A hand hold should be capable of withstanding without rupture a side force of 1500N - attention is drawn to ISO 15085.*

### 3.23 Bilge Pumps and Buckets

**3.23.1** No bilge pump may discharge into a cockpit unless that cockpit opens aft to the sea.
3.23.2 Bilge pumps shall not be connected to cockpit drains. (OSR 3.09) **

3.23.3 Bilge pumps and strum boxes shall be readily accessible for maintenance and for clearing out debris **

3.23.4 Unless permanently installed, each bilge pump handle shall be provided with a lanyard or catch or similar device to prevent accidental loss **

3.23.5 The following shall be provided:

| a) | two permanently installed manual bilge pumps, one operable from above, the other from below deck. Each pump shall be operable with all cockpit seats, hatches and companionways shut and shall have permanently installed discharge pipe(s) of sufficient capacity to accommodate simultaneously both pumps | Mo0,1,2 |
| b) | one permanently installed manual bilge pump either above or below deck. The pump shall be operable with all cockpit seats, hatches and companionways shut and shall have a permanently installed discharge pipe. | Mu0,1,2 |
| c) | multihulls shall have provision to pump out all watertight compartments (except those filled with impermeable buoyancy). | Mu0,1,2,3,4 |
| d) | at least one permanently installed manual bilge pump operable with all cockpit seats, hatches and companionways shut | Mo3 |
| e) | one manual bilge pump | Mo4 |
| f) | two buckets of stout construction each with at least 9 litres (2 UK gallons, 2.4 US gallons) capacity. Each bucket to have a lanyard | ** |

3.24 Compass

3.24.1 The following shall be provided:-- **

| a) | a marine magnetic compass, independent of any power supply, permanently installed and correctly adjusted with deviation card, and | ** |
| a) | a magnetic compass independent of any power supply, capable of being used as a steering compass which may be hand-held | MoMo0,1,2,3 |
3.25 **Halyards.**
No mast shall have less than two halyards, each capable of hoisting a sail.

3.26 **Bow Fairlead**
A bow fairlead, closed or closable and a cleat or securing arrangement, suitable for towing shall be permanently installed.

3.27 **Navigation Lights (see OSR 2.03.3)**
3.27.1 Navigation lights shall be mounted so that they will not be masked by sails or the heeling of the yacht.
3.27.2 Navigation lights shall not be mounted below deck level and should be at no less height than immediately under the upper lifeline.
3.27.3 Navigation light intensity

<table>
<thead>
<tr>
<th>LOA</th>
<th>Guide to required minimum power rating for an electric bulb in a navigation light</th>
</tr>
</thead>
<tbody>
<tr>
<td>under 12 m (39.4 ft)</td>
<td>10 W</td>
</tr>
<tr>
<td>12 m (39.4 ft) and above</td>
<td>25 W</td>
</tr>
</tbody>
</table>

3.27.4 Reserve navigation lights shall be carried having the same minimum specifications as the navigation lights above, with a separable power source, and wiring or supply system essentially separate from that used for the normal navigation lights.

3.27.5 Spare bulbs for navigation lights shall be carried, or for lights not dependent on bulbs, appropriate spares.

3.28 **Engines, Generators, Fuel**
3.28.1 **Propulsion Engines**
   a) Engines and associated systems shall be installed in accordance with their manufacturers' guidelines and shall be of a type, strength, capacity, and installation suitable for the size and intended use of the yacht.
   
   b) An inboard propulsion engine when fitted shall: be provided with a permanently installed exhaust, coolant, and fuel supply systems and fuel tank(s);
be securely covered; and have adequate protection from the effects of heavy weather.

c) A propulsion engine required by Special Regulations shall provide a minimum speed in knots of \((1.8 \times \text{square root of LWL in metres})\) or \((\text{square root of LWL in feet})\)

d) A propulsion engine shall be provided either as an inboard propulsive engine or as an outboard engine with associated tanks and fuel supply systems, all securely fastened.

e) An inboard propulsion engine shall be provided for yachts

f) Boats of less than 12.0 m hull length may be provided with an inboard propulsion engine, or an outboard engine together with permanently installed fuel supply systems and fuel tank(s) may be used as an alternative.

3.28.2 Generator
A separate generator for electricity is optional. However, when a separate generator is carried it shall be permanently installed, securely covered, and shall have permanently installed exhaust, cooling and fuel supply systems and fuel tank(s), and have adequate protection from the effects of heavy weather.

3.28.3 Fuel Systems

a) Each fuel tank provided with a shutoff valve. Except for permanently installed linings or liners, a flexible tank is not permitted as a fuel tank

b) The propulsion engine shall have a minimum amount of fuel which may be specified in the Notice of Race but if not, shall be sufficient to be able to meet charging requirements for the duration of the race and to motor at the above minimum speed for at least 8 hours

3.28.4 Battery Systems

a) When an electric starter is the only method for starting the engine, the yacht shall have a separate battery, the primary purpose of which is to start the
b) All rechargeable batteries on board shall be of the sealed type from which liquid electrolyte cannot escape. Other types of battery installed on board at 1/12 may continue in use for the remainder of their service lives.

3.29 Communications Equipment, EPFS (Electronic Position-Fixing System), Radar, AIS

Provision of GMDSS is unlikely to be mandatory for small craft during the term of the present Special Regulations.

3.29.1 The following shall be provided:

a) A marine radio transceiver (or if stated in the Notice of Race, an installed satcom terminal), and
   i an emergency antenna when the regular antenna depends upon the mast.

b) When the marine radio transceiver is VHF:
   i it shall have a rated output power of 25W
   ii it shall have a masthead antenna, and co-axial feeder cable with not more than 40% power loss
   iii the following types and lengths of co-axial feeder cable will meet the requirements of OSR 3.29.1 (b)(ii): (a) up to 15m (50ft) - type RG8X ("mini 8"); (b) 15-28m (50-90ft) - type RG8U; (c) 28-43m (90-140ft) - type 9913F (uses conventional connectors, available from US supplier Belden); (d) 43-70m) 140-230ft - type LMR600 (uses special connectors, available from US supplier Times Microwave).
   iv it should include channel 72 (an international ship-ship channel which, by common use, has become widely accepted as primary choice for ocean racing yachts anywhere in the world)
   v VHF transceivers installed after 31 December 2015 shall be DSC capable
   vi DSC capable VHF transceivers shall be programmed with an assigned MMSI (unique to the boat), be connected to a GPS receiver and
be capable of making distress alert calls as well as sending and receiving a DSC position report with another DSC equipped station.

vii Notwithstanding OSR 3.29.1 (b) a yacht in a Category Zero race shall have a marine VHF DSC radio in accordance with OSR 3.29.1 (b) (i) and (ii) covering all international and US marine channels and meeting the class D specification of the ITU.

c) At least two hand-held satellite telephones, watertight or with waterproof covers and internal batteries. When not in use each to be stowed in a grab bag (see OSR 4.21)

d) At least two hand-held marine VHF transceivers each with min 5w output power, watertight or with waterproof covers. When not in use to be stowed in a grab bag (see OSR 4.21)

e) A hand-held marine VHF transceiver, watertight or with a waterproof cover. When not in use to be stowed in a grab bag or emergency container (see OSR 4.21) The handheld receiver should have Digital Selective Calling (DSC) and be equipped with GPS.

f) Independent of a main radio transceiver, a radio receiver capable of receiving weather bulletins

g) It is strongly recommended that a hand-held watertight transceiver operating on one or more aviation frequencies including 121.5MHz should be provided. This will enable communications between the yacht and aircraft on SAR duties, not all of which have maritime VHF. When not in use to be stowed in a grab bag (see OSR 4.21.2)

h) A D/F (direction-finding) radio receiver operating on 121.5MHz to take a bearing on a PLB or EPIRB, or an alternative device for man-overboard location when each crew member has an appropriate personal unit (see OSR 5.07);

i) An EPFS (Electronic Position-Fixing System) (e.g. GPS)
j) A Standard-C satellite terminal (GMDSS) shall be permanently installed and permanently powered up for the duration of the race and for which the race committee shall have polling authority.

k) An MF/HF marine SSB transceiver (GMDSS/DSC) with at least 125 watts transmitter power and frequency range from at least 1.6 to 29.9 MHz with permanently installed antenna and earth.

l) An active radar set permanently installed either:
   i) A pulse (magnetron) unit with not less than 4kW PEP and an antenna unit with a maximum dimension not less than 533mm; Or
   ii) A frequency modulated continuous wave (FMCW) Broadband Radar™ unit
       The radar antenna unit shall remain essentially horizontal when the yacht is heeled and at least 7 meters above the water. Installations in place before January 2006 shall comply as closely as possible with OSR 3.29(L).

m) A class A AIS

n) An AIS Transponder

   o) An AIS Transponder is recommended

p) The AIS Transponder shall share the masthead VHF antenna via a low loss AIS antenna splitter. An acceptable alternative is a dedicated AIS antenna that is a minimum of 381mm long, mounted with its base at least 3 meters above the water, and fed with coax cable that has a maximum 40% power loss.

3.29.2 Yachts are reminded that no reflector, active or passive, is a guarantee of detection or tracking by a vessel using radar.

   a) The attention of persons in charge is drawn to legislation in force or imminent affecting the territorial seas of some countries in which the carriage of an AIS set is or will be mandatory for certain vessels including relatively small craft.
### SECTION 4 - PORTABLE EQUIPMENT & SUPPLIES
(for the yacht
(for water & fuel see OSR 3.21 and OSR 3.28)

#### 4.01 Sail Letters & Numbers

| 4.01.1 | Yachts which are not in an ISAF International Class or Recognized Class shall comply with RRS 77 and Appendix G as closely as possible, except that sail numbers allotted by a State authority are acceptable. |
| 4.01.2 | Sail numbers and letters of the size carried on the mainsail must be displayed by alternative means when none of the numbered sails is set. |

#### 4.02 Hull marking (colour blaze)

| 4.02.1 | To assist in SAR location:

  a) Each yacht shall show at least 4 m² of fluorescent pink or orange or yellow colour as far as possible in a single area on the coachroof and/or deck where it can best be seen |

  b) Each yacht is recommended to show at least 1 m² of fluorescent pink or orange or yellow colour as far as possible in a single area on the coachroof and/or deck where it can best be seen |

| 4.02.2 | Multihulls shall show on the underside, where they can be seen when inverted, an solid area of highly-visible colour (e.g. Day-Glo pink, orange, or yellow) of at least 1m² |

| 4.02.3 | Each yacht is recommended to show on each underwater appendage an area of highly-visible colour |

#### 4.03 Soft Wood Plugs

Soft wood plugs, tapered and of the appropriate size, shall be attached or stowed adjacent to the appropriate fitting for every through-hull opening.

#### 4.04 Jackstays, Clipping Points and Static Safety Lines

| 4.04.1 | Jackstays shall be provided-

  a) attached to through-bolted or welded deck plates or other suitable and strong anchorage fitted on |
deck, port and starboard of the yacht’s centre line to provide secure attachments for safety harness:-

b) comprising stainless steel 1 x 19 wire of minimum diameter 5 mm (3/16 in), high modulus polyethylene (such as Dyneema/Spectra) rope or webbing of equivalent strength;

c) which, when made from stainless steel wire shall be uncoated and used without any sleeving;

d) 20kN (2,040 kgf or 4,500 lbf) min breaking strain webbing is recommended;

e) at least two of which should be fitted on the underside of a multihull in case of inversion

4.04.2 Clipping Points:-

shall be provided-

a) attached to through-bolted or welded deck plates or other suitable and strong anchorage points adjacent to stations such as the helm, sheet winches and masts, where crew members work for long periods:-

b) which, together with jackstays and static safety lines shall enable a crew member-

i to clip on before coming on deck and unclip after going below;

ii whilst continuously clipped on, to move readily between the working areas on deck and the cockpit(s) with the minimum of clipping and unclipping operations.

c) The provision of clipping points shall enable two-thirds of the crew to be simultaneously clipped on without depending on jackstays

d) In a trimaran with a rudder on the outrigger, adequate clipping points shall be provided that are not part of the deck gear or the steering mechanism, in order that the steering mechanism can be reached by a crew member whilst clipped on.

e) Warning - U-bolts as clipping points - see OSR 5.02.1(a)
4.05 Fire Extinguishers

4.05.1 Fire extinguishers, at least two, readily accessible in suitable and different parts of the yacht

4.05.2 Fire Extinguishers, at least two, of minimum 2kgs each of dry powder or equivalent

4.05.3 Fire extinguishers, at least three of minimum 2 kgs each of dry powder or equivalent including at least one extinguisher or system suitable for dealing with fire in a machinery space

4.05.4 A fire blanket adjacent to every cooking device with an open flame

4.06 Anchor(s)

4.06.1 An anchor or anchors shall be carried according to the table below:

<table>
<thead>
<tr>
<th>LOA</th>
<th>Detail</th>
<th>Race Category</th>
</tr>
</thead>
<tbody>
<tr>
<td>any</td>
<td>The specification of anchor, chain and rope shall be in accordance with relevant class rules or the rules of a recognised Classification Society (eg Lloyd's, DNV, etc.)</td>
<td>MoMu0</td>
</tr>
<tr>
<td>8.5 m (28 ft) and over</td>
<td>2 anchors together with a suitable combination of chain and rope, all ready for immediate use</td>
<td>MoMu1,2,3</td>
</tr>
<tr>
<td>under 8.5 m (28 ft)</td>
<td>1 anchor together with a suitable combination of chain and rope, all ready for immediate use</td>
<td>MoMu1,2,3</td>
</tr>
<tr>
<td>any</td>
<td>1 anchor, readily accessible</td>
<td>MoMu4</td>
</tr>
</tbody>
</table>

4.07 Flashlight(s) and Searchlight(s)

4.07.1 The following shall be provided:-

a) A watertight, high-powered searchlight, suitable for searching for a person overboard at night and for collision avoidance with spare batteries and bulbs, and

b) A watertight flashlight with spare batteries and bulb

c) for Mu3,4 the watertight flashlight in OSR 4.07.1 (b) shall be stowed in the grab bag or emergency container
d) a watertight high-intensity heavy duty handlamp powered by the ships’ batteries, instantly available for use on deck and in the cockpit, with spare bulbs

<table>
<thead>
<tr>
<th>4.08</th>
<th>First Aid Manual and First Aid Kit</th>
</tr>
</thead>
<tbody>
<tr>
<td>4.08.1</td>
<td>A suitable First Aid Manual shall be provided</td>
</tr>
<tr>

<td></td>
</tr>
<tr>
<td>b) First Aid at Sea, by Douglas Justins and Colin Berry, published by Adlard Coles Nautical, London</td>
<td></td>
</tr>
<tr>
<td>c) Le Guide de la medecine a distance, by Docteur J Y Chauve, published by Distance Assistance BP33 F-La Baule, cedex, France.</td>
<td></td>
</tr>
<tr>
<td>d) ‘PAN-PAN medico a bordo’ in Italian edited by Umberto Verna. <a href="http://www.panpan.it">www.panpan.it</a></td>
<td></td>
</tr>
<tr>
<td>e) Skipper’s Medical Emergency Handbook by Dr Spike Briggs and Dr Campbell Mackenzie <a href="http://www.msos.org.uk">www.msos.org.uk</a></td>
<td></td>
</tr>
</tbody>
</table>

4.08.2 A First Aid Kit shall be provided

4.08.3 The contents and storage of the First Aid Kit should reflect the guidelines of the Manual carried, the likely conditions and duration of the passage, and the number of people aboard the yacht.

4.09 Foghorn

A foghorn shall be provided

4.10 Radar Reflector

4.10.1 A passive radar reflector shall be carried with:
Octahedral circular sector plates of minimum diameter 300 mm (12”) or
Octahedral rectangular plates of minimum diagonal dimension 405 mm (16”) or
a non-Octahedral reflector with a documented Root Mean Square minimum Radar Cross Section (RCS) area of 2 m2 from 0-360 degrees in azimuth and +/- 20 degrees in heel.

4.10.2 A Radar Target Enhancer (RTE) shall be carried
which complies with ISO 8729-2:2009 or equivalent.

<table>
<thead>

<tbody>
<tr>
<td>MoMu0,1,2,3</td>
<td>4.15.1 Emergency steering shall be provided as follows:</td>
</tr>
</tbody>
</table>

a) except when the principal method of steering is by means of an unbreakable metal tiller, an emergency tiller capable of being fitted to the rudder stock;

b) crews must be aware of alternative methods of steering the yacht in any sea condition in the event of rudder loss. At least one method must have been proven to work on board the yacht. An inspector may require that this method be demonstrated.

<table>
<thead>
<tr>
<th>Category</th>
<th>4.16 Tools and Spare Parts</th>
</tr>
</thead>
</table>
Tools and spare parts, including effective means to quickly disconnect or sever the standing rigging from the hull shall be provided.

4.17 **Yacht's name**

Yacht's name shall be on miscellaneous buoyant equipment, such as lifejackets, cushions, lifebuoys, lifeslings, grab bags etc.

4.18 **Marine grade retro-reflective material**

Marine grade retro-reflective material shall be fitted to lifebuoys, lifeslings, liferafts and lifejackets. See OSRs 5.04, 5.08.

4.19 **EPIRBs**

4.19.1 A 406 MHz EPIRB shall be provided

a) At least two 406 MHz EPIRBs shall be provided

b) It is recommended that a 406 MHz EPIRB should include an internal GPS, and also a 121.5MHz transmitter for local homing.

c) Every EPIRB shall be registered with the appropriate authority associated with the country code in the hexadecimal identification (15 Hex ID) of the beacon. A beacon can be registered online with the Cospas-Sarsat IBRD if the country does not provide a registration facility and the country has allowed direct registration in the IBRD.

d) Every ship’s 406 MHz EPIRB shall be water and manually activated.

e) A list of registration numbers of 406 EPIRBs should be notified to event organizers and kept available for immediate use.

f) Consideration should be given to the provision of a locator device (e.g. an “Argos” beacon) operating on non-SAR frequencies, to aid salvage if a yacht is abandoned.

g) See OSR 3.29.1(e) for on-board D/F and OSR 5.07.1(b) for personal EPIRBs (PLBs)
## 4.20 Liferafts

### 4.20.1 Liferaft Construction and Packed Equipment

a) One or more inflatable liferafts shall be provided with a total capacity to accommodate at least the total number of people on board.

b) Each liferaft provided shall comply with either:-

i) SOLAS LSA code 1997 Chapter IV or later version, or

ii) ISO 9650-1:2005, Part I, Type I, Group A or

iii) ISAF liferaft manufactured before 01/16 until replacement is due at end of serviceable life, or

iv) ORC liferaft manufactured before the end 01/03 until replacement is due at end of serviceable life.

c) A sufficient number of liferafts shall be provided so that in the event of one liferaft being lost or rendered unserviceable, adequate capacity remains for all persons on board

d) Liferafts shall comply with SOLAS LSA code 1997 Chapter IV or later version.

### 4.20.2 Minimum Liferaft Equipment

a) A SOLAS liferaft shall contain as a minimum a SOLAS A pack;

b) An ISO 9650 liferaft shall contain as a minimum Pack 1 (greater than 24 hour pack);

c) An ISO 9650 liferaft shall contain as a minimum Pack 2 (less than 24 hour pack);

d) The minimum contents of the ISO liferaft equipment packs are listed below. Not all items are necessarily packed within the liferaft. Some items are permitted to be carried within an accompanying waterproof grab bag which shall be in a readily accessible location:
### ISAF OFFSHORE SPECIAL REGULATIONS

^a Drinking water in the grab bag (if any) may be replaced with a desalinator device

#### 4.20.3 Liferaft Packing and Stowage

- a) Each liferaft shall be packed either in:-
  - i) a rigid container securely stowed on the working deck, in the cockpit or in an open space; or:-
  - ii) a rigid container or valise securely stowed in a
dedicated weather tight locker containing liferaft and abandon ship equipment only which is readily accessible and opens onto the cockpit or working deck, or transom

b) In a yacht with age or series date before June 2001, a liferaft may be packed in a valise not exceeding 40kg securely stowed below deck adjacent to a companionway.

c) Liferaft stowage on a multihull and a monohull with moveable ballast shall be such that each liferaft may be readily removed and launched whether or not the yacht is inverted.

d) The end of each liferaft painter line should be permanently made fast to a strong point on board the yacht.

4.20.4 Liferaft Launching

a) Each raft shall be capable of being got to the lifelines or launched within 15 seconds.

b) Each liferaft of more than 40kg weight should be stowed in such a way that the liferaft can be dragged or slid into the sea without significant lifting.

4.20.5 Liferaft Servicing and Inspection

a) Liferafts based on type are to be serviced at a service station approved by the manufacturer at the following maximum intervals:

i) SOLAS liferafts annually.

ii) ISO 9650 canister packed liferafts no less frequently than every 3 years.

iii) ISO 9650 valise packed liferafts no less frequently than 3 years except that hired valise liferafts shall be serviced annually.

iv) ISAF liferafts annually

v) ORC liferafts annually

b) Servicing certificates (original or a copy) shall be kept on board.

4.21 Grab Bags

4.21.1 Grab Bag or Emergency Container for Multihulls Without Liferafts
a) A multihull without a liferaft shall have, readily accessible whether or not the yacht is inverted, either a watertight compartment or a grab bag with the following minimum contents. A grab bag shall have inherent flotation, at least 0.1 m\(^2\) area of fluorescent orange colour on the outside, shall be marked with the name of the yacht, and shall have a lanyard and clip.

b) Note: it is not intended to duplicate in a grab bag etc. items required by other OSRs to be on board the yacht - this regulation covers only the stowage of those items

c) a watertight hand-held marine VHF transceiver plus a spare set of batteries

d) a watertight flashlight with spare batteries and bulb

e) 2 red parachute and 3 red hand flares

f) a watertight strobe light with spare batteries

g) a knife

4.21.2 Grab Bags to Accompany Liferafts

a) A yacht is recommended to have for each liferaft, a grab bag with the following minimum contents. A grab bag should have inherent flotation, at least 0.1 m\(^2\) area of fluorescent orange colour on the outside, should be marked with the name of the yacht, and should have a lanyard and clip.

b) Note: it is not intended to duplicate in a grab bag items required by other OSRs to be on board the yacht - these recommendations cover only the stowage of those items

4.21.3 Grab Bag Recommended Contents

a) 2 red parachute and 2 red hand flares and cyalume-type chemical light sticks (red flares compliant with SOLAS)

b) watertight hand-held EPFS (Electronic Position-Fixing System) (eg GPS) in at least one of the grab bags carried by a yacht

c) SART (Search and Rescue Transponder) in at
least one of the grab bags carried by a yacht

d) a combined 406MHz/121.5MHz EPIRB registered to the boat (see OSR 4.19.1) in at least one of the grab bags

e) water in re-sealable containers or a hand-operated desalinator plus containers for water

f) a watertight hand-held marine VHF transceiver plus a spare set of batteries

g) a watertight flashlight with spare batteries and bulb

h) dry suits or thermal protective aids or survival bags

i) second sea anchor for the liferaft (not required if the liferaft has already a spare sea anchor in its pack) (recommended standard ISO 17339) with swivel and >30m line diameter >9.5 mm

j) two safety tin openers (if appropriate)

k) first-aid kit including at least 2 tubes of sunscreen. All dressings should be capable of being effectively used in wet conditions. The first-aid kit should be clearly marked and re-sealable.

l) signalling mirror

m) high-energy food (min 10 000kJ per person recommended for Cat Zero)

n) nylon string, polythene bags, seasickness tablets (min 6 per person recommended)

o) watertight hand-held aviation VHF transceiver (if race area warrants)

p) water in re-sealable containers and a hand-operated desalinator

q) hand-held satellite telephone with waterproof cover and internal batteries

r) strobe light

s) medical supplies including any for pre-existing medical conditions of any crew member
t) spare unbreakable spectacles for any crew members needing them

u) wet notebook with captive pencil

v) powerful whistle (operated by mouth)

w) 6 red SOLAS compliant parachute flares, 3 white parachute flares, 2 orange SOLAS compliant smoke flares, cyalume-type light sticks

x) a watertight, high-powered torch (flashlight) with spare batteries and bulbs

y) watertight hand-held EPFS (Electronic Position-Fixing System) (e.g. GPS)

z) SART (Search and Rescue Transponder)

4.21.4 Swimmer of the Watch Bag

a) It is recommended to keep a bag, stored ready for immediate use within reach of the main companionway hatch, to facilitate the recovery of a man overboard by a swimmer of the watch and containing-

b) 50 metres of buoyant 8mm rope

c) a pair of swim fins

d) a semi-automatic life jacket

e) suitable clothing to effect a man overboard recovery in cold water

4.22 Lifebuoys

4.22.1 The following shall be provided within reach of the helmsman and ready for instant use:

a) a lifebuoy with a self-igniting light and a drogue

b) In addition to a) above, one lifebuoy within reach of the helmsman and ready for instant use, equipped with:

   i) a whistle, a drogue, a self-igniting light and

   ii) a pole and flag. The pole shall be either permanently extended or be capable of being fully automatically extended (not extendable by hand) in less than 20 seconds. It shall be attached to the lifebuoy with 3 m (10 ft) of
floating line and is to be of a length and so ballasted that the flag will fly at least 1.8 m (6 ft) off the water.

iii Each lifebuoy shall be equipped with a sachet of fluoresceine dye

4.22.2 When at least two lifebuoys (and/or Lifeslings) are carried, at least one of them shall depend entirely on permanent (e.g. foam) buoyancy.

4.22.3 Each inflatable lifebuoy and any automatic device (e.g. pole and flag extended by compressed gas) shall be tested and serviced at intervals in accordance with its manufacturer’s instructions.

4.22.4 Each lifebuoy or lifesling shall be fitted with marine grade retro-reflective material (4.18).

4.22.5 It is recommended that the colour of each lifebuoy be a safety colour in the yellow-red range.

4.23 Pyrotechnic and Light Signals

4.23.1 Pyrotechnic signals shall be provided conforming to SOLAS LSA Code Chapter III Visual Signals and not older than the stamped expiry date (if any) or if no expiry date stamped, not older than 4 years.

**TABLE 13**

4.24 Heaving Line

a) a heaving line shall be provided 15 m - 25 m (50 ft - 75 ft) length readily accessible to cockpit.

b) the “throwing sock” type is recommended - see Appendix D

c) A lifesling shall be provided

4.25 Cockpit Knife

A strong, sharp knife, sheathed and securely restrained shall be provided readily accessible from the deck or a cockpit.
4.26 Storm & Heavy Weather Sails

4.26.1 Design

a) it is strongly recommended that persons in charge consult their designer and sailmaker to decide the most effective size for storm and heavy weather sails. The purpose of these sails is to provide safe propulsion for the yacht in severe weather - they are not intended as part of the racing inventory. The areas below are maxima. Smaller areas are likely to suit some yachts according to their stability and other characteristics.

4.26.2 High Visibility

a) Every storm jib shall either be of highly-visible coloured material (e.g. dayglo pink, orange or yellow) or have a highly-visible coloured patch at least 50% of the area of the sail (up to a maximum diameter of 3m) added on each side; and also that a rotating wing mast should have a highly-visible coloured patch on each side. A storm sail purchased after January 2014 shall have the material of the body of the sail a highly-visible colour.

b) it is strongly recommended that the storm trysail should either be made of or have a patch of highly visible colour.

4.26.3 Materials

a) aromatic polyamides, carbon and similar fibres shall not be used in a trysail or storm jib but spectra/dyneema and similar materials are permitted

b) it is strongly recommended that a heavy-weather jib does not contain aromatic polyamides, carbon and similar fibres other than spectra/dyneema.

4.26.4 The following shall be provided:

a) sheeting positions on deck for each storm and heavy-weather sail;

b) for each storm or heavy-weather jib, a means to attach the luff to the stay, independent of any luff-groove device. A heavy weather jib shall have the
means of attachment readily available. A storm jib shall have the means of attachment permanently attached;

Storm and heavy weather jib areas shall be calculated as: 

\[
(0.255 \times \text{luff length} \times (\text{luff perpendicular} + 2 \times \text{half width}))*
\]

To apply to sails made in January 2012 and after.

c) a storm trysail which shall be capable of being sheeted independently of the boom with trysail area not greater than 17.5% mainsail hoist (P) \times \text{mainsail foot length (E)}. The storm trysail area shall be measured as 

\[
(0.5 \times \text{leech length} \times \text{shortest distance between tack point and leech}).
\]

The storm trysail shall have neither headboard nor battens, however a storm trysail is not required in a yacht with a rotating wing mast which can adequately substitute for a trysail. The method of calculating area applies to sails made in January 2012 and after.

d) if a storm trysail is required by either OSR 4.26.4 (c) or OSR 4.26.4 (g) the yacht's sail number and letter(s) shall be placed on both sides of the trysail (or on a rotating wing mast as substitute for a trysail) in as large a size as practicable;

e) a storm jib of area not greater than 5% height of the foretriangle squared, with luff maximum length 65% height of the foretriangle;

f) a heavy-weather jib (or heavy-weather sail in a yacht with no forestay) of area not greater than 13.5% height of the foretriangle squared;

g) either a storm trysail as defined in OSR 4.26.4(c), or mainsail reefing to reduce the luff by at least 40%.

h) in the case of a yacht with an in-mast furling mainsail, the storm trysail must be capable of being set while the mainsail is furled.

i) A trysail track should allow for the trysail to be hoisted quickly when the mainsail is lowered whether or not the mainsail is stowed on the main.
It is strongly recommended that a boat has either a dedicated trysail track permanently installed with the entry point accessible to a person standing on the main deck or coachroof, or a permanently installed stay on which to hank the trysail.

k) It is strongly recommended that an inner forestay is provided either permanently installed or readily set up, on which to set the storm jib.
deployment at the bow, shall be provided complete with all gear needed to rig and deploy the sea anchor or drogue to withstand long periods in rough conditions (see OSR Appendix F)

</tbody>
</table>
5.01 Lifejacket

5.01.1 Each crew member shall have a lifejacket as follows:-

a) i In accordance with ISO 12402 – 3 (Level 150) or equivalent, including EN 396 or UL 1180

ii Lifejackets manufactured after 1 January 2012 shall be in accordance with ISO 12402–3 (Level 150) and shall be fitted with:-

• an emergency light in accordance with either ISO 12402-8 or SOLAS LSA code 2.2.3.
• a sprayhood in accordance with ISO 12402-8.
• a full deck safety harness in accordance with ISO 12401 (ISO 1095) including a crotch or thigh strap (holding down device) as specified in ISO 12401 (ISO 1095).

• If of an inflatable type either
  (a) automatic, manual and oral inflation or
  (b) manual and oral inflation

Notes: ISO 12402 requires Level 150 lifejackets to be fitted with a mandatory whistle and retro-reflective material. Also, when fitted with a safety harness, ISO 12402 requires that this shall be the full safety harness in accordance with ISO 12401. Any equivalent lifejacket shall have equal requirements.

Persons of larger than average build are generally more buoyant than those of average build and so do not require a lifejacket with greater levels of flotation. Wearing a Level 275 lifejacket may hamper entry into liferafts.

b) fitted with either a crotch strap(s) / thigh straps or a full safety harness in accordance with ISO 12401,

Note: The function of lifejacket crotch/thigh straps is to hold the buoyancy element down. A crew member before a race should adjust a lifejacket to fit then retain that lifejacket for the duration of the race. Correct adjustment is fundamental to the lifejacket functioning correctly.
c) fitted with a lifejacket light in accordance with SOLAS LSA code 2.2.3 (white, >0.75 candelas, >8 hours),

**

d) if inflatable have a compressed gas inflation system,

**

e) if inflatable, regularly checked for gas retention,

**

f) compatible with the wearer's safety harness,

**

g) clearly marked with the yacht's or wearer's name,

MoMu0

h) fitted with a splashguard / sprayhood in accordance with ISO 12402 – 8,

MoMu0

i) Fitted with a PLB unit (as with other types of EPIRB, should be properly registered with the appropriate authority)

MoMu0

j) It is strongly recommended that a lifejacket has a splashguard / sprayhood See ISO 12402 – 8,

MoMu1,2,3,4

5.01.2 For every gas inflatable lifejacket a spare cylinder and if appropriate a spare activation head shall be carried.

MoMu0

5.01.3 Each yacht shall carry a spare lifejacket or lifejacket(s) as required in OSR 5.01.1 sufficient for at least 10% of the total number of persons on board (minimum one spare lifejacket). At least one of the required spare lifejacket(s) shall be a semi - automatic for use in man overboard recovery.

MoMu0

5.01.4 The person in charge shall personally check each lifejacket at least once annually.

**

5.02 Safety Harness and Safety Lines (Tethers)

MoMu0,1,2,3

5.02.1 Each crew member shall have a harness and safety line that complies with ISO 12401 or equivalent with a safety line not more than 2m in length.

MoMu0,1,2,3

Harnesses and safety lines manufactured prior to Jan 2010 shall comply with either ISO 12401 or EN 1095. Harnesses and safety lines manufactured prior to Jan 2001 are not permitted.

MoMu0,1,2,3

a) Warning it is possible for a plain snaphook to disengage from a U bolt if the hook is rotated under load at right-angles to the axis of the U-bolt. For this reason the use of snaphooks with positive locking devices is strongly
**recommended.**

5.02.2 At least 30% of the crew shall each, in addition to the above be provided with either:-

- a) a safety line not more than 1m long, or
- b) a mid-point snaphook on a 2m safety line
- c) Each yacht shall carry spare harness and safety line units as required in OSR 5.02.1 above sufficient for at least 10% of the total number of persons on board (minimum one unit).

5.02.3 A safety line purchased in January 2001 or later shall have a coloured flag embedded in the stitching, to indicate an overload. A line which has been overloaded shall be replaced as a matter of urgency.

5.02.4 A crew member's lifejacket and harness shall be compatible.

5.02.5 It is strongly recommended that:-

- a) static safety lines should be securely fastened at work stations;
- b) A harness should be fitted with a crotch strap or thigh straps.
- c) to draw attention to wear and damage, stitching on harness and safety lines should be of a colour contrasting strongly with the surrounding material;
- d) snaphooks should be of a type which will not self-release from a U-bolt (see OSR 5.02.1(a)) and which can be easily released under load (crew members are reminded that a personal knife may free them from a safety line in emergency);
- e) a crew member before a race should adjust a harness to fit then retain that harness for the duration of the race.

5.02.6 Warning - a safety line and safety harness are not designed to tow a person in the water and it is important that the shortest safety line length possible be used with a harness to minimise or eliminate the risk of a person's torso becoming immersed in water outside the boat, especially when working on the foredeck. 1m safety lines or the midpoint snaphook on
a 2m line should be used for this purpose. The diligent use of a properly adjusted safety harness and the shortest safety line practicable is regarded as by far the most effective way of preventing man overboard incidents.

### 5.03 Personal Location Lights

<table>
<thead>
<tr>
<th>Category</th>
</tr>
</thead>
<tbody>
<tr>
<td>MoMu0</td>
</tr>
</tbody>
</table>

a) two packs of miniflares or two personal location lights (either SOLAS or strobe) shall be provided for each crew member: one should be attached to, or carried on, the person when on deck at night.

### 5.04 Foul Weather Suits

<table>
<thead>
<tr>
<th>Category</th>
</tr>
</thead>
<tbody>
<tr>
<td>MoMu0</td>
</tr>
</tbody>
</table>

a) a foul weather suit with hood shall be supplied to each crew member

b) it is recommended that a foul weather suit should be fitted with marine-grade retro-reflective material, and should have high-visibility colours on its upper parts and sleeve cuffs. See OSR 4.18

### 5.05 Knife

<table>
<thead>
<tr>
<th>Category</th>
</tr>
</thead>
<tbody>
<tr>
<td>MoMu0</td>
</tr>
</tbody>
</table>

A knife, one shall be supplied to each crew member to be worn on the person at all times

### 5.06 Watertight flashlight

<table>
<thead>
<tr>
<th>Category</th>
</tr>
</thead>
<tbody>
<tr>
<td>MoMu0</td>
</tr>
</tbody>
</table>

A buoyant watertight flashlight, one shall be supplied to each crew member.

### 5.07 Survival Equipment

<table>
<thead>
<tr>
<th>Category</th>
</tr>
</thead>
<tbody>
<tr>
<td>MoMu0</td>
</tr>
</tbody>
</table>

5.07.1 One set of Survival Equipment shall be supplied to each crew member to include:-

a) an immersion suit (attention is drawn to EN ISO 15027-1 constant wear suits, and EN ISO 15027-2 abandonment suits and the LSA Code Chapter II, 2,3);

b) a PLB (Personal Locator Beacon) equipped with 406MHz and 121.5MHz

c) a personal unit in addition to the PLB in OSR 4.07.1(b) if the location device carried by the yacht in accordance with OSR 3.29.1(h) requires it;

d) **Attention is drawn to the value of keeping on the person a combined 406MHz/121.5MHz PLB when on deck: this may aid location in a man overboard**
**5.07.2 Incident independent of the equipment carried by the parent vessel**

e) Where possible every PLB shall be registered with the appropriate authority associated with the country code in the hexadecimal identification (15 Hex ID) of the beacon. A beacon can be registered online with the Cospas-Sarsat IBRD if the country does not provide a registration facility and the country has allowed direct registration in the IBRD.

Diving Equipment

5.08.1 A yacht shall carry at least two diving suits each to cover the entire body and including gloves, fins and portable air supplies.
6.01 **At least 30% but not fewer than two members of a crew, including the skipper shall have undertaken training within the five years before the start of the race in both 6.02 topics for theoretical sessions, and 6.03 topics which include practical, hands-on sessions.**

6.01.2 Every member of a crew including the skipper shall have undertaken training as in OSR 6.01

6.01.3 **It is strongly recommended that all crew members should undertake training as in OSR 6.01 at least once every five years**

6.01.4 Except as otherwise provided in the Notice of Race, an in-date certificate gained at an ISAF Approved Offshore Personal Survival Training course shall be accepted by a race organizing authority as evidence of compliance with Special Regulation 6.01. See Appendix G - Model Training Course, for further details.

### 6.05 Medical Training

**6.05.1** At least one member of the crew shall have a valid STCW 95 A-VI/4-2 (Proficiency In Medical Care) certificate or equivalent.

**6.05.2** In addition to 6.05.1 another member of the crew shall have a first aid certificate completed within the last five years meeting any of the following requirements:

1. A certificate listed on the ISAF website www.sailing.org/specialregs of MNA recognised courses
2. STCW 95 First Aid Training complying with A-VI/1-3 – Elementary First Aid or higher STCW level

**6.05.3** At least one member of the crew shall be familiar with First Aid procedures, hypothermia, drowning, cardiopulmonary resuscitation and relevant communications systems (see OSR 6.02.7 and 6.03.3).

**6.05.4** An example model first aid training course is included in Appendix N.

### 6.06 Diving Training

**6.06.1** At least 30% of the crew shall have received appropriate diving training to enable them to carry out basic repairs underwater and to provide assistance if necessary in recovery of a man overboard.
